

Thank you for trusting us for
your Tower Garden seedlings!

Satisfaction Guaranteed!

We work hard & promise to only ship high quality, healthy seedlings!

If something happens between our house and yours and your seedlings incur shipping damage or do not arrive happy, **please send photos and details**

Support@ATLUrbanFarms.com immediately to be covered under our guarantee.

If unhappy seedlings are planted immediately in your Tower Garden and they do not improve within 5 days, we will replace 5 or more or refund less than 5 damaged seedlings.

We are here to help all along the way!

When your seedlings arrive, immediately identify & inspect each one.

- To identify your seedlings, locate the orange corner/dot of the tray and turn the tray so the orange corner is at the top left.
- The handwritten numbers on your Packing List correspond to the Seedling Chart on the back of this instruction sheet. You can transfer the names to the Seedling Chart.
- CAREFULLY push each seedling up from the bottom of the tray. A pencil eraser or pen is ideal. Avoid using anything sharp and puncturing the rockwool.
- DO NOT pull the foliage or stems from the top. Pulling the seedling will cause irreversible damage.

Plant your seedlings in your Tower Garden® as soon as possible.

- Seedlings may look tired or stressed and have yellow leaves from travel.
- Best practice before transplanting is to gently rinse each seedling under running water.
- In summer, plant your seedlings in the morning or evening to minimize extra heat stress.

If you cannot plant immediately:

- Avoid allowing your seedling order to be in extreme temperatures such as hot driveways or cold porches as this will cause your seedlings to die quickly.
- Remove seedlings from the shipping container asap. (Don't forget to label them!)
- Place the seedlings in good light, preferably outside, or in a sunny window, or place them under your light kit. Failure to provide adequate light will cause them to expire.
- Water your seedlings. The rockwool must stay moist; never let the rockwool dry out.
